

RFID Environment Monitoring System

Your Real-time Data Center Management Solution

Our RFID Environmental Monitoring System consists a series of robust **active RFID tags and readers** equipped with **accurate environmental sensors**.

The system serves purposes of real-time **tracking, monitoring and managing** of **environmental conditions** in **data center** and other similar locations.

With our system, you can keep track of **temperature, humidity, light, motion** and more environmental parameters.

“Keep an eye on everything that matters”

“Every degree equals to dollars”

KEY Benefits

Easy Environmental Monitoring

Enhanced Efficiency & Accuracy

Cost Saving

Big Data for the Future

Avoid Unexpected Changes & Damages

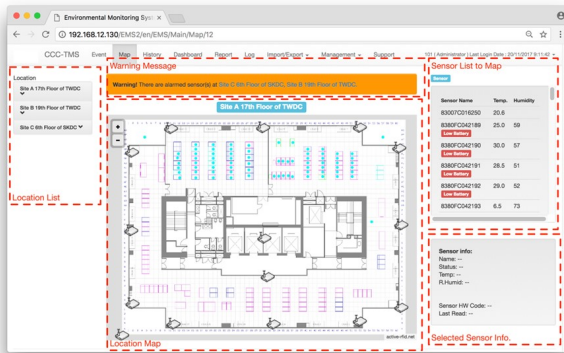

Stable performance
Environment monitoring
Notification
Sensitive
Ease of use

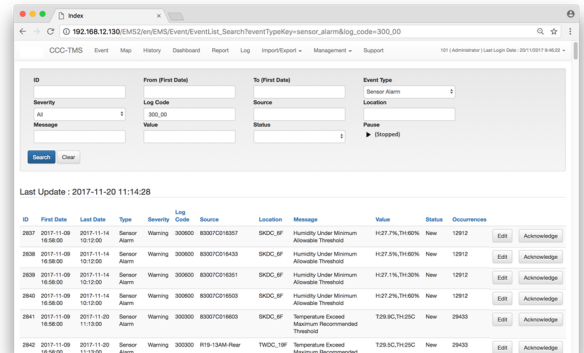

KEY System Features

- **Wireless sensors** to capture, monitor and sync real-time environmental data
- Robust **web-based system** to access reports and control all devices
- **Real-time reports** to show location information & environmental data
- **Automatic alert** to address any surpassing environmental threshold
- **Modifiable environmental thresholds** to suit different requirements
- **System log** to track usages, activities, settings, errors and other historical records

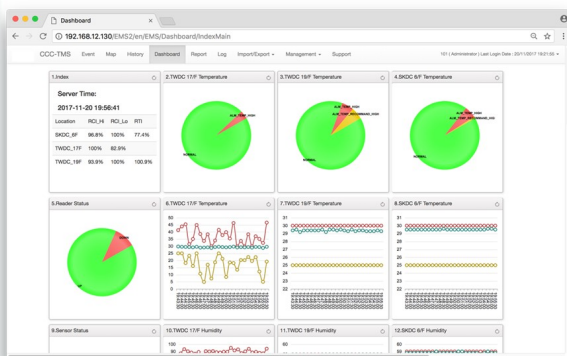

System Screen Captures

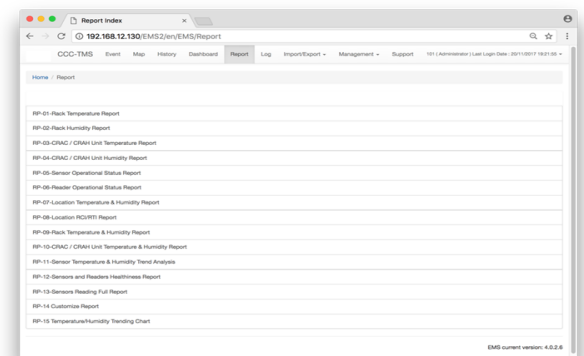

Real-time Map view showing all tags and readers deployed

Event page showing a list of system event messages

Dashboard page showing system data and statistic chart

Report page showing all available reports
